

Child Marriage Poses Serious Risks to Children

PHYSICAL IMPACT

- Women who marry before age 19 have a 23% greater risk of developing a serious health condition including diabetes, cancer, heart attack, or stroke.¹
- Teen girls who marry tend to have more children, earlier, and more closely spaced.² They are:
 - » Much more (130%) likely to get pregnant than unmarried teens who live with a partner³
 - » More likely to have their first child before age 18⁴
 - » 40% more likely to have a second birth within 24 months of their first⁵
 - » Nearly 3x more likely to have at least 5 children⁶
- Young women and girls aged 16-19 face intimate partner violence victimization rates almost 3x the national average.⁷
- Overall, women who marry as children are more likely to seek and access health services, compared to women who married in adulthood.⁸

ECONOMIC IMPACT

- Child brides tend to come from poverty and remain in poverty.⁹
 - » Girls who marry underage are up to 31 percentage points more likely to live in future poverty.¹⁰
 - » For teen mothers, getting married and later divorcing can more than double the likelihood of poverty.¹¹
- Earning potential and work opportunities are limited by interrupted education and low education levels. Girls who marry under age 19 are:
 - » 50% more likely to drop out of high school
 - » 4x less likely to graduate college¹²

SOCIAL IMPACT

- Child brides tend to be isolated from support networks including school, friends, and family.
- The majority (70-80%) of marriages entered into when at least one person is under age 18 ultimately end in divorce.¹³
 - » According to one study based on census data, 23% of children who marry are already separated or divorced by the time they turn 18¹⁴
- These negative outcomes, combined with the economic impacts of child marriage which limit a woman's ability to become financially independent, increase vulnerability to multiple victimization and often result in consequences becoming cyclical and intergenerational.

MENTAL IMPACT

- Women who marry before age 18 are more likely to report stressful life events.
- Women who marry before age 18 are also present with significantly more psychiatric disorders, including:
 - » mood and anxiety disorders including major depressive disorder
 - » antisocial personality disorder (prevalence nearly 3x higher)¹⁵
- Social isolation and feeling a lack of control over their lives can contribute to a "child bride's" poor mental health. In fact, agencies working with girls facing or trying to escape forced marriages report that nearly all have contemplated or attempted suicide.¹⁶

ENDNOTES

- ¹ Compared with a study cohort of those who married between age 19 and 25. See Matthew E. Dupre and Sarah O. Meadows, “[Disaggregating the Effects of Marital Trajectories on Health](#),” *Journal of Family Issues* (Vol. 28, No. 5, May 2007, 623-652), at pp. 630-636, and 646-647; see also Bridget M. Kuehn, “[Early Marriage Has Lasting Consequences on Women’s Mental Health](#),” *news@JAMA* (August 29, 2011), posts by *The Journal of the American Medical Association* (“research has linked such early marriages to a higher risk of HIV or other sexually transmitted infections, cervical cancer, unintended pregnancy, maternal death during childbirth, and abortion; early marriage is also associated with malnutrition among offspring”).
